SINDH ECONOMIC ZONE MANAGEMENT COMPANY

RESPONSES TO REQUESTS FOR CLARIFICATIONS / QUERIES SUBMITTED BY PROSPECTIVE BIDDERS IN RELATION TO THE REQUEST FOR PROPOSALS DOCUMENT

FOR

MARBLE CITY KARACHI PROJECT

DATED: DECEMBER 26, 2022

IMPORTANT NOTICE

This RESPONSE TO PROSPECTIVE BIDDERS' QUERIES (this "**Response Document No. 1**") is in furtherance to the queries and requests for clarifications received from the prospective Bidders in respect of the Request for Proposals document issued on November 17, 2022 (the "**RFP**") by the Sindh Economic Zone Management Company ("**SEZMC**") for the MARBLE CITY KARACHI PROJECT (the "**Project**").

Unless expressly specified otherwise, all capitalized terms used herein shall bear the meaning ascribed thereto in the RFP.

This Response Document No. 1 is not to be construed as an addendum / corrigendum to the RFP; its sole purpose is to provide responses to the prospective Bidders' queries / requests for clarifications on the RFP, received by SEZMC. Bidders should independently satisfy themselves with the responses set out herein and should not rely on this Response Document No.1. To the extent any changes to the RFP are required, such changes will be made through an addendum / corrigendum (as applicable) to the RFP, which will be issued prior to the Bid Submission Date.

No SEZMC Party makes any representation (express or implied) as to the accuracy or completeness of the information contained herein, or in any other document made available by any SEZMC Party to the prospective Bidders in connection with the Project (including with regards to the Bidding Process). No SEZMC Party shall have any liability for this Response Document No. 1 or for any other written or oral communication transmitted or made to the prospective Bidders.

No SEZMC Party shall be liable in any manner whatsoever to reimburse or compensate the prospective Bidders for any costs, fees, damages or expenses incurred by the prospective Bidders in evaluating or acting upon this Response Document No. 1. Each prospective Bidder should conduct its own independent investigations and analysis and should check the accuracy, adequacy, correctness, reliability and completeness of the statements and information contained in this Response Document No. 1 or in any document issued by SEZMC in connection with the Project.

By submitting the Bids, Bidders shall be deemed to have independently examined and verified, understood and accepted, all the terms and conditions stated in the RFP (including any addendum / corrigendum issued by SEZMC to the RFP) and this Response Document No. 1.

SEZMC reserves its right, in its full discretion, to modify the RFP, the requirements of the Project and / or the information contained in this Response Document No. 1 at any time as per the applicable law and shall not be liable to reimburse or compensate any prospective Bidder for any costs, taxes, expenses or damages incurred by the prospective Bidder in such an event.

RESPONSES TO THE PROSPECTIVE BIDDERS' REQUESTS FOR CLARIFICATIONS / QUERIES

Sr. No.	REFERENCE	QUERY / CLARIFICATION REQUESTED	RESPONSE
1.	–	Given area of plots can be modified?	Yes, the area of plots may be modified in the final master plan, subject to the applicable laws. However, for bidding purposes, the concept master plan shall be followed.
2.	–	Can commercial plot be increased as per requirements?	Please see response no. 1.
3.	–	Land acquisition for the excess road from M9 to site gate shall be responsibility of SEZMC?	SEZMC shall only assist and facilitate the Concessionaire for such purposes.
4.	–	Operation & Mineral started after construction period can it be extended If plots are not sold?	Please refer to clause 2.3 of the Concession Agreement.
5.	–	Please clarify that the industrialist commitments shall be done by developers or the govt or SEZMC will help out in this?	Please refer to the Technical Evaluation Criteria B–4, attached as Annexure B of the Instructions to Bidders. Bidders are required to provide undertakings from marble sector companies / entities in respect of industries to be set up in the Marble City Karachi.
6.	–	Any mandatory requirement for industry commitment at the time of bidding please explain?	Please refer to the Technical Evaluation Criteria B-4, attached as Annexure B of the Instructions to Bidders. While it is not a mandatory requirement, 10 points shall be awarded to the Bidder on showing industrial commitments.

Sr. No.	REFERENCE	QUERY / CLARIFICATION REQUESTED	RESPONSE
7.	–	What is financial Evaluation Criteria? Does percentage applicable for realize revenue (A/R) or Actual receipts (3 years revenue receipts)?	Please refer to the Financial Evaluation Criteria, attached as Annexure B of the Instructions to Bidders.
8.	–	The Project Revenue should be benchmarked at a higher value than the PKR 6.5 Billion mentioned in the RFP. We suggest a BMR of PKR 14 billion.	No change.
9.	–	Percentage of Revenue sharing beyond BMR limit should be set at 50% for SEZMC and 50% for the Developer.	No change.
10.	–	There should be a provision in the Concession Agreement to recover development charges at original cost plus 20% from the buyers of the plot.	No change. The Concessionaire shall determine the price of Plots based on the development cost and market prices.
11.	–	We would therefore request you to kindly extend the Proposal Submission date to February 15, 2022 to allow proper time for complying with the information submission on the various technical and financial forms of the proposal/bid.	No change.
12.	General Comment (RFP)	Volume I of the RFP does not stipulate any matter which relates to change/replacement of the Lead Member. Therefore, it is queried that whether the same change/replacement of the Lead Member is	Following the Bid Submission Date, there shall be no change in the Consortium, by addition/withdrawal of a Consortium Member or change in percentage shareholding of any Consortium Member, except as

Sr. No.	REFERENCE	QUERY / CLARIFICATION REQUESTED	RESPONSE
		allowed without any prior approval(s)?	may be permitted by SEZMC/TFEC.
13.	General Comment (RFP)	No information regarding the right of way on the external road networks has been provided. It is requested that the same is provided so that costs envisaged to be incurred by the successful bidder is made part of the EPC Cost. It is therefore requested that the requisite approvals for entire right of way for external road network be obtained by SEZMC pre-hand. Moreover, if relocation of any utilities (such as electricity poles & etc.) are required, SEZMC will provide land and facilities along with the cost incurred for the said relocation.	1. With regards to the information in relation to the right of way on the external road networks, please refer to Annexure A attached to this Response Document No. 1. 2. SEZMC shall only assist and facilitate the Concessionaire for such purposes.
14.	General Comment (RFP)	Water resourcing is a big issue and in case of water supply from KWSB Hub Canal, the same to be guaranteed by the GoS. It is public knowledge that that the Hub Canal is being rehabilitated to provide increased supply, however there are certain risks that need to be mitigated from day one under this Project, and those should not be passed onto the Concessionaire hereunder. Therefore, in consideration of the same it is requested provision o utilities be an obligation on SEZMC and/or the same be made an obligation of the GoS under the Provincial Support Agreement.	No change. Considering the commitment by KW&SB, SEZMC shall only assist and facilitate the Concessionaire for such purposes.

Sr. No.	REFERENCE	QUERY / CLARIFICATION REQUESTED	RESPONSE
15.	Clause 5.3.5 of the Instructions to Bidders	It is requested that, considering the subject clause allows room for SEZMC to request for changes in the Project Agreements, the Bidders be allowed to request for changes to the Project Agreements as well.	No change. Bidders are encouraged to provide their queries / comments on the Project Agreements prior to the Bid Submission Date.
16.	Clause 6.3.4 and 6.3.5 of the Instructions to Bidders	Bid may be rejected but it is advised that the Bid Security should not be forfeited.	No Change.
17.	Annexure A – Basic Eligibility Criteria Of the Instructions to Bidders "For construction: The Bidder (in case of a Consortium, any Consortium Member) must possess valid PEC registration certificate in category C-A having specialization codes of CE-01, CE-02, CE-10, BC01, ME-02, ME-03 and EE-06 or by engaging the sub- contractor for not more than two specialization codes. (Valid PEC registration certificates is required to be attached). (Foreign entities if participating in the Bidding Process should strictly follow the rules stipulated in PEC bye laws for participation)."	It is requested that clarity be provided whether the bidder is required to submit a letter of association from the sub-contractor for any two (2) codes.	Please refer to clause 2.1.7 and Annexure A (*Basic Eligibility Criteria*), each of the Instructions to Bidders.

Sr. No.	REFERENCE	QUERY / CLARIFICATION REQUESTED	RESPONSE
18.	Annexure A – Basic Eligibility Criteria of the Instructions to Bidders "For design: The Bidder (in case of a Consortium, any Consortium Member) must possess valid PEC registration certificate in Project Profile Code 1215. (Valid PEC registration certificate is required to be attached). (Foreign entities if participating in the Bidding Process should strictly follow the rules stipulated in PEC bye laws for participation)."	It is highlighted that the designer cannot form part of the Consortium and the same requirement is requested to be removed and should only be brought in as a consultant.	The Consortium should identify a consultant firm for design (to satisfy this condition, a contractual arrangement in the form of memorandum of understanding or equivalent shall be submitted).
19.	General Comment (Concession Agreement)	It is requested that clarity be provided in relation to procurement of an interest-free loan by the Concessionaire in the event the Concessionaire does not receive advances from potential buyers. This will consequently allow the Concessionaire to avoid any hinderance which may be caused towards construction works due to failure to receive advances from buyer.	No change.
20.	General Comment (Concession Agreement)	It is requested that the relevant boundary wall location coordinates, for marking on google earth for determining the exact location of the project	Relevant documents will be uploaded on SEZMC's website.

Sr. No.	REFERENCE	QUERY / CLARIFICATION REQUESTED	RESPONSE
		site, are provided for better assessment of the Project.	
21.	General Comment (Concession Agreement)	It is requested that the route alignment and total length for electric supply from the relevant grid stations (i.e., Surjani grid station & Maymar grid station) are provided for better assessment of the Project.	Bidders are encouraged to carry out their own assessments. All necessary information has been provided in Volume II (*Project Scope*) of the RFP.
22.	General Comment (Concession Agreement)	It is requested that clarity be provided in relation to whether the electric transformer for the allotted plots will be provided by the Concessionaire or the relevant electricity distributor (i.e., K-Electric)?	Unless required by the applicable laws, it is the responsibility of the Concessionaire.
23.	General Comment (Concession Agreement)	It is requested that clarity be provided in relation to the land acquisition/allocation for the parking area at the entrance and whether the same is envisaged to be made part of the total allocated three hundred (300) acres area or not? In addition to the above, it is queried, in the event the Concessionaire require to set up avenues to generate renewable energy. Can the subject land be utilized for the purposes of the same. If not then it is requested that clarity be provided in relation to such matters such as setting up renewable energy farms as well as other water filtration plants and placement of gas bowsers if required.	1. Such parking is not included within the 300 acres. 2. For the purposes of power generation (if applicable), the same shall be carried out within the allocated 300 acres.

Sr. No.	REFERENCE	QUERY / CLARIFICATION REQUESTED	RESPONSE
24.	General Comment (Concession Agreement)	It is requested that clarity be provided in relation to whether the land acquisition for the route that will be utilized for laying out electric supply line will be arranged by the Concessionaire or by SEZMC?	SEZMC shall only assist and facilitate the Concessionaire for such purposes.
25.	General Comment (Concession Agreement)	It is queried that whether the conceptual master plan, provided there in the RFP, is required to remain the same or can the same be modified by the Concessionaire in accordance with the ratio.	Please see response no. 1.
26.	General Comment (Concession Agreement)	It is requested that SEZMC provides the bidder with information regarding the number of cross-drainage structures that are envisaged to be constructed on Site.	Please refer to the Topographical Survey Report, as uploaded on SEZMC's website. No SEZMC Party makes any representation (express or implied) as to the accuracy or completeness of the information contained therein and Bidders are encouraged to carry out their own independent assessments.
27.	General Comment (Concession Agreement)	Generally, the draft concession agreement does not provide the requisite risk allocation coverages and the relevant protections that are customary in the precedent Government of Sindh public private partnership agreements. While certain areas have been highlighted in the comments below, it is requested that the draft concession agreement is revised to conform with the risk allocations and coverages provided by the Government of Sindh	No change.

Sr. No.	REFERENCE	QUERY / CLARIFICATION REQUESTED	RESPONSE
		in precedent transactions. Considering the major implications of the currently drafted provisions in the draft concession agreement for risk allocation and related matters and the complete revamping of the draft concession agreement required, it is proposed that the bidders are permitted to provide a full-blown mark-up of the draft concession agreement and the same is negotiated and finalized with the counsels of the bidders prior to completion of the bidding process/bid submission date. Please note that capturing every single change by way of comments is a very cumbersome and ineffective exercise and a mark-up will speed up the process. Such mark-up can be provided once the Government of Sindh provides its confirmation.	
28.	General Comment (Concession Agreement)	Considering that SEZMC has undertaken various financial obligations in the draft concession agreement in respect of various contingent liabilities (e.g. termination), it is proposed that SEZMC provides a financial instrument or other liquid security to secure its obligations.	No change.
29.	General Comment (Concession Agreement)	The precedent public private partnership agreements are premised on a detailed project monitoring and approval system undertaken by the	No change.

Sr. No.	REFERENCE	QUERY / CLARIFICATION REQUESTED	RESPONSE
		Independent Engineer and the Independent Auditor. Decisions, approvals and determinations in such system are done by the Independent Engineer and the Independent Auditor (as applicable). While the draft concession agreement has proposed roles for the Independent Engineer and the Independent Auditor, it is noted that SEZMC approvals, consents and determinations are unnecessarily required. It is proposed that all such provisions requiring SEZMC approvals, consents and determinations are amended to reflect such approvals, consents and determinations being done by the IE and IA. The SEZMC approvals should not be required once the Independent Engineer and the Independent Auditor have made their determinations.	
30.	General Comment (Concession Agreement)	In consideration of the fact that various terms have been observed to be a defined term under previous Sindh public private partnership agreement, it is requested that the same be utilized for the purposes of clarity and quantifying. For the purposes of clarity, the term "material breach" or the phrase "materially and adversely" has been observed to be defined in previous public private partnership project of Sindh.	No change.

Sr. No.	REFERENCE	QUERY / CLARIFICATION REQUESTED	RESPONSE
31.	General Comment (Concession Agreement)	The draft concession agreement is silent on the rights of the Zone Enterprises in case of an event of default of the Concessionaire or SEZMC. The entire concept needs further deliberations. Please consider a scenario whereby the Zone Enterprises have paid the relevant purchase price (or advances) and the agreement is terminated due to reasons attributable to SEZMC or the GoS. Please advise as to what will be the rights of the zone enterprises in such scenarios.	Please refer to clause 2.4.2 of the Lease Agreement (attached as Appendix 7 of the Concession Agreement).
32.	Clause 1.1 of the Concession Agreement. ""O&M Performance Security Amount" means an amount equal to PKR 20,000,000/- (Pakistani Rupees Twenty Million only) subject to an escalation of seven percent (7%) in each Operating Year;"	In consideration of the fact that the O&M Fee is not a fixed amount, it is requested that the O&M Performance Security is also not a fixed amount and that the same be a up to five percent (5%) of the O&M Fee (being the same as provided in the Financial Model Form).	No change.
33.	Clause 1.1 of the Concession Agreement. ""RE Period" means the duration of a Relief Event as determined by the Independent Engineer, provided that if more than one Relief Event is ongoing at the same time, for the purposes of determining the RE Period, such Relief Events shall be considered as running	The effects of a Relief Event/Political Force Majeure Event may be continuing in nature and therefore the need to compensate for the same may extend beyond the RE Period/PFME Period.	No change. Please refer to clause 19 of the Concession Agreement.

Sr. No.	REFERENCE	QUERY / CLARIFICATION REQUESTED	RESPONSE
	concurrently in the same RE Period;" ""PFME Period" means the duration of a Political Force Majeure Event as determined by the Independent Engineer, provided that if more than one Political Force Majeure Event is ongoing at the same time, for the purposes of determining the PFME Period, such Political Force Majeure Events shall be considered as running concurrently in the same PFME Period;"		
34.	Clause 3.2 of the Concession Agreement. "On a regular (at least weekly) basis from the Effective Date, the Concessionaire shall advise the Independent Appointees as to the status of the satisfaction of the Conditions Precedent for which the Concessionaire is responsible, provided that…"	It is requested if SEZMC could provide clarification in regards to the medium being used for such a weekly status report. This will ensure avoidance of any logistical issue during the completion of CPs. Moreover, it is requested that this be a monthly requirement and not a weekly.	No change. Such reports shall be submitted both in soft and hard copies.
35.	Clause 4.1.1 of the Concession Agreement. "The Concessionaire shall notify the SEZMC and the Independent Auditor not more than three (03) Months prior to the Construction Performance Security Expiry	It is requested that clarity be provided in regards to what is to be Notified by the Concessionaire here.	The Concessionaire shall notify SEZMC and the Independent Auditor of the Construction Performance Security's impending expiry three (03) months prior to the Construction Performance Security Expiry Date.

Sr. No.	REFERENCE	QUERY / CLARIFICATION REQUESTED	RESPONSE
	Date."		
36.	Clause 4.1.1 of the Concession Agreement. "If the Construction Performance Security is not extended at least two (02) Months prior to the Construction Performance Security Expiry Date, the SEZMC may encash the full amount of the Construction Performance Security." Clause 4.1.2 of the Concession Agreement. "The Concessionaire shall deliver the O&M Performance Security to the SEZMC on or before the Scheduled Substantial Completion Date and shall ensure that the same is maintained in full force and effect until the later of: (a) expiry of a period of six (06) Months from the Final Expiry Date; or (b) the date determined in accordance with clause 20.9.3 (the "O&M Performance Security Expiry Date"). The Concessionaire shall notify the SEZMC and the Independent Auditor of the impending expiry of the O&M Performance Security not more than three (03) Months prior to the O&M	It is worth highlighting that the two (2) subject clauses seem to illustrate that at a given point in time the Concessionaire shall be obligated to maintain the Construction Performance Security along side with the O&M Performance Security. Therefore, it is requested that the clarity be provided regarding the two (2) securities existing "side-by-side".	No change. The O&M Performance Security is meant to secure the SEZMC against the Concessionaire's O&M obligations, which commence from the Substantial Completion Date while the Construction Performance Security expires three months following the Construction Completion Date. The scenarios of encashment of each Performance Security are independent.

Sr. No.	REFERENCE	QUERY / CLARIFICATION REQUESTED	RESPONSE
	Performance Security Expiry Date. If the O&M Performance Security is not extended at least two (02) Months prior to the O&M Performance Security Expiry Date, the SEZMC may encash the full amount of the O&M Performance Security."		
37.	Clause 4.1.3 of the Concession Agreement. "The Concessionaire shall ensure that the face amount of the O&M Performance Security shall, prior to the start of each Operating Year, be equal to the applicable O&M Performance Security Amount for such Operating Year."	It is requested that clarity be provided in relation to "applicable" and what does this entail.	The O&M Performance Security is subject to an escalation of 7% in each Operating Year. Therefore, the O&M Performance Security Amount for each Operating Year should include such escalation.
38.	Clause 4.1.5 of the Concession Agreement. "The Concessionaire undertakes that no Encumbrance of any nature shall be created on the Site or immovable properties of the Concessionaire or those comprising of the Project."	It is requested that clarity be provided that whether the zone enterprises (who have been allotted a lease of fifty (50) years) will be subject to the same	Please refer to clause 2.6.4 of the Lease Agreement (attached as Appendix 7 of the Concession Agreement).
39.	Clause 4.1.7.1 of the Concession Agreement.	What are the remedies for the Concessionaire in the event the Project fails to attain "SEZ" status?	Neither party is obligated to ensure that the project attains "SEZ status".

Sr. No.	REFERENCE	QUERY / CLARIFICATION REQUESTED	RESPONSE
	"compliance with and performance of all duties, obligations, acts, and deeds set out in, in each case, the Legal Requirements, including the SEZ Laws, in the event the Project obtains the status of a "Special Economic Zone";" Clause 4.2.8 of the Concession Agreement. "facilitating the Concessionaire in the submission of a zone application for declaration of the Project as a "Special Economic Zone" in accordance with the SEZ Laws (as may be mutually agreed between the Parties to seek declaration of the Project as a "Special Economic Zone")"		
40.	Clause 4.6.1 of the Concession Agreement. "The Concessionaire shall procure and use any temporary land identified by the Environmental and Social Impact Assessment as required by the Concessionaire for the Project Activities."	SEZMC is requested that this be subject to assistance provided by SEZMC as acquisition of land is more logistically better compared to a private party wishing to acquire temporary land.	No change.
41.	Clause 5.5.1.2 of the Concession Agreement.	It is requested that these be quantified in terms of lengths or location considering the Site may have	1. Please refer to Annexure A attached to this Response Document No. 1.

Sr. No.	REFERENCE	QUERY / CLARIFICATION REQUESTED	RESPONSE
	"constructing and maintaining an external road network to the Site and an internal road network within the Site, till the zero point of each Plot, in accordance with the requirements of this Agreement, appendix 1, the Legal Requirements, and the Master Plan"	various access routes leading to it. Furthermore, how does SEZMC envisage the right of way being awarded to the winning bidder and will there be a separate instrument which will be executed in relation to such right of way?	2. SEZMC shall assist and facilitate the Concessionaire in acquiring necessary Approvals and rights of way for the construction of external access roads to the Site.
42.	Clause 8.1.2 of the Concession Agreement. "The Independent Engineer shall (in consultation with the SEZMC) issue the Substantial Completion Certificate upon Substantial Completion of the Construction Activities, even if certain works or things forming part thereof are outstanding and not yet complete…." Clause 8.2.2 of the Concession Agreement. "The Construction Completion Certificate shall be issued by the Independent Engineer (in consultation with the SEZMC) upon Construction Completion."	In consideration of the fact that the Independent Engineer is a third-party independent party in the Project and that that Independent Engineer is to gauge independently, it is queried that why is the consultation of the SEZMC required?	This is in line with precedent transactions.
43.	Clause 9.1.1.1 of the Concession Agreement. "procuring all electricity and other utilities	As per the information received for the representatives of SEZMC, SEZMC has been assured by the relevant distribution agencies (such	Any legal agreement with regard to the same will be between the Concessionaire and the utility provider. SEZMC shall only assist and facilitate the

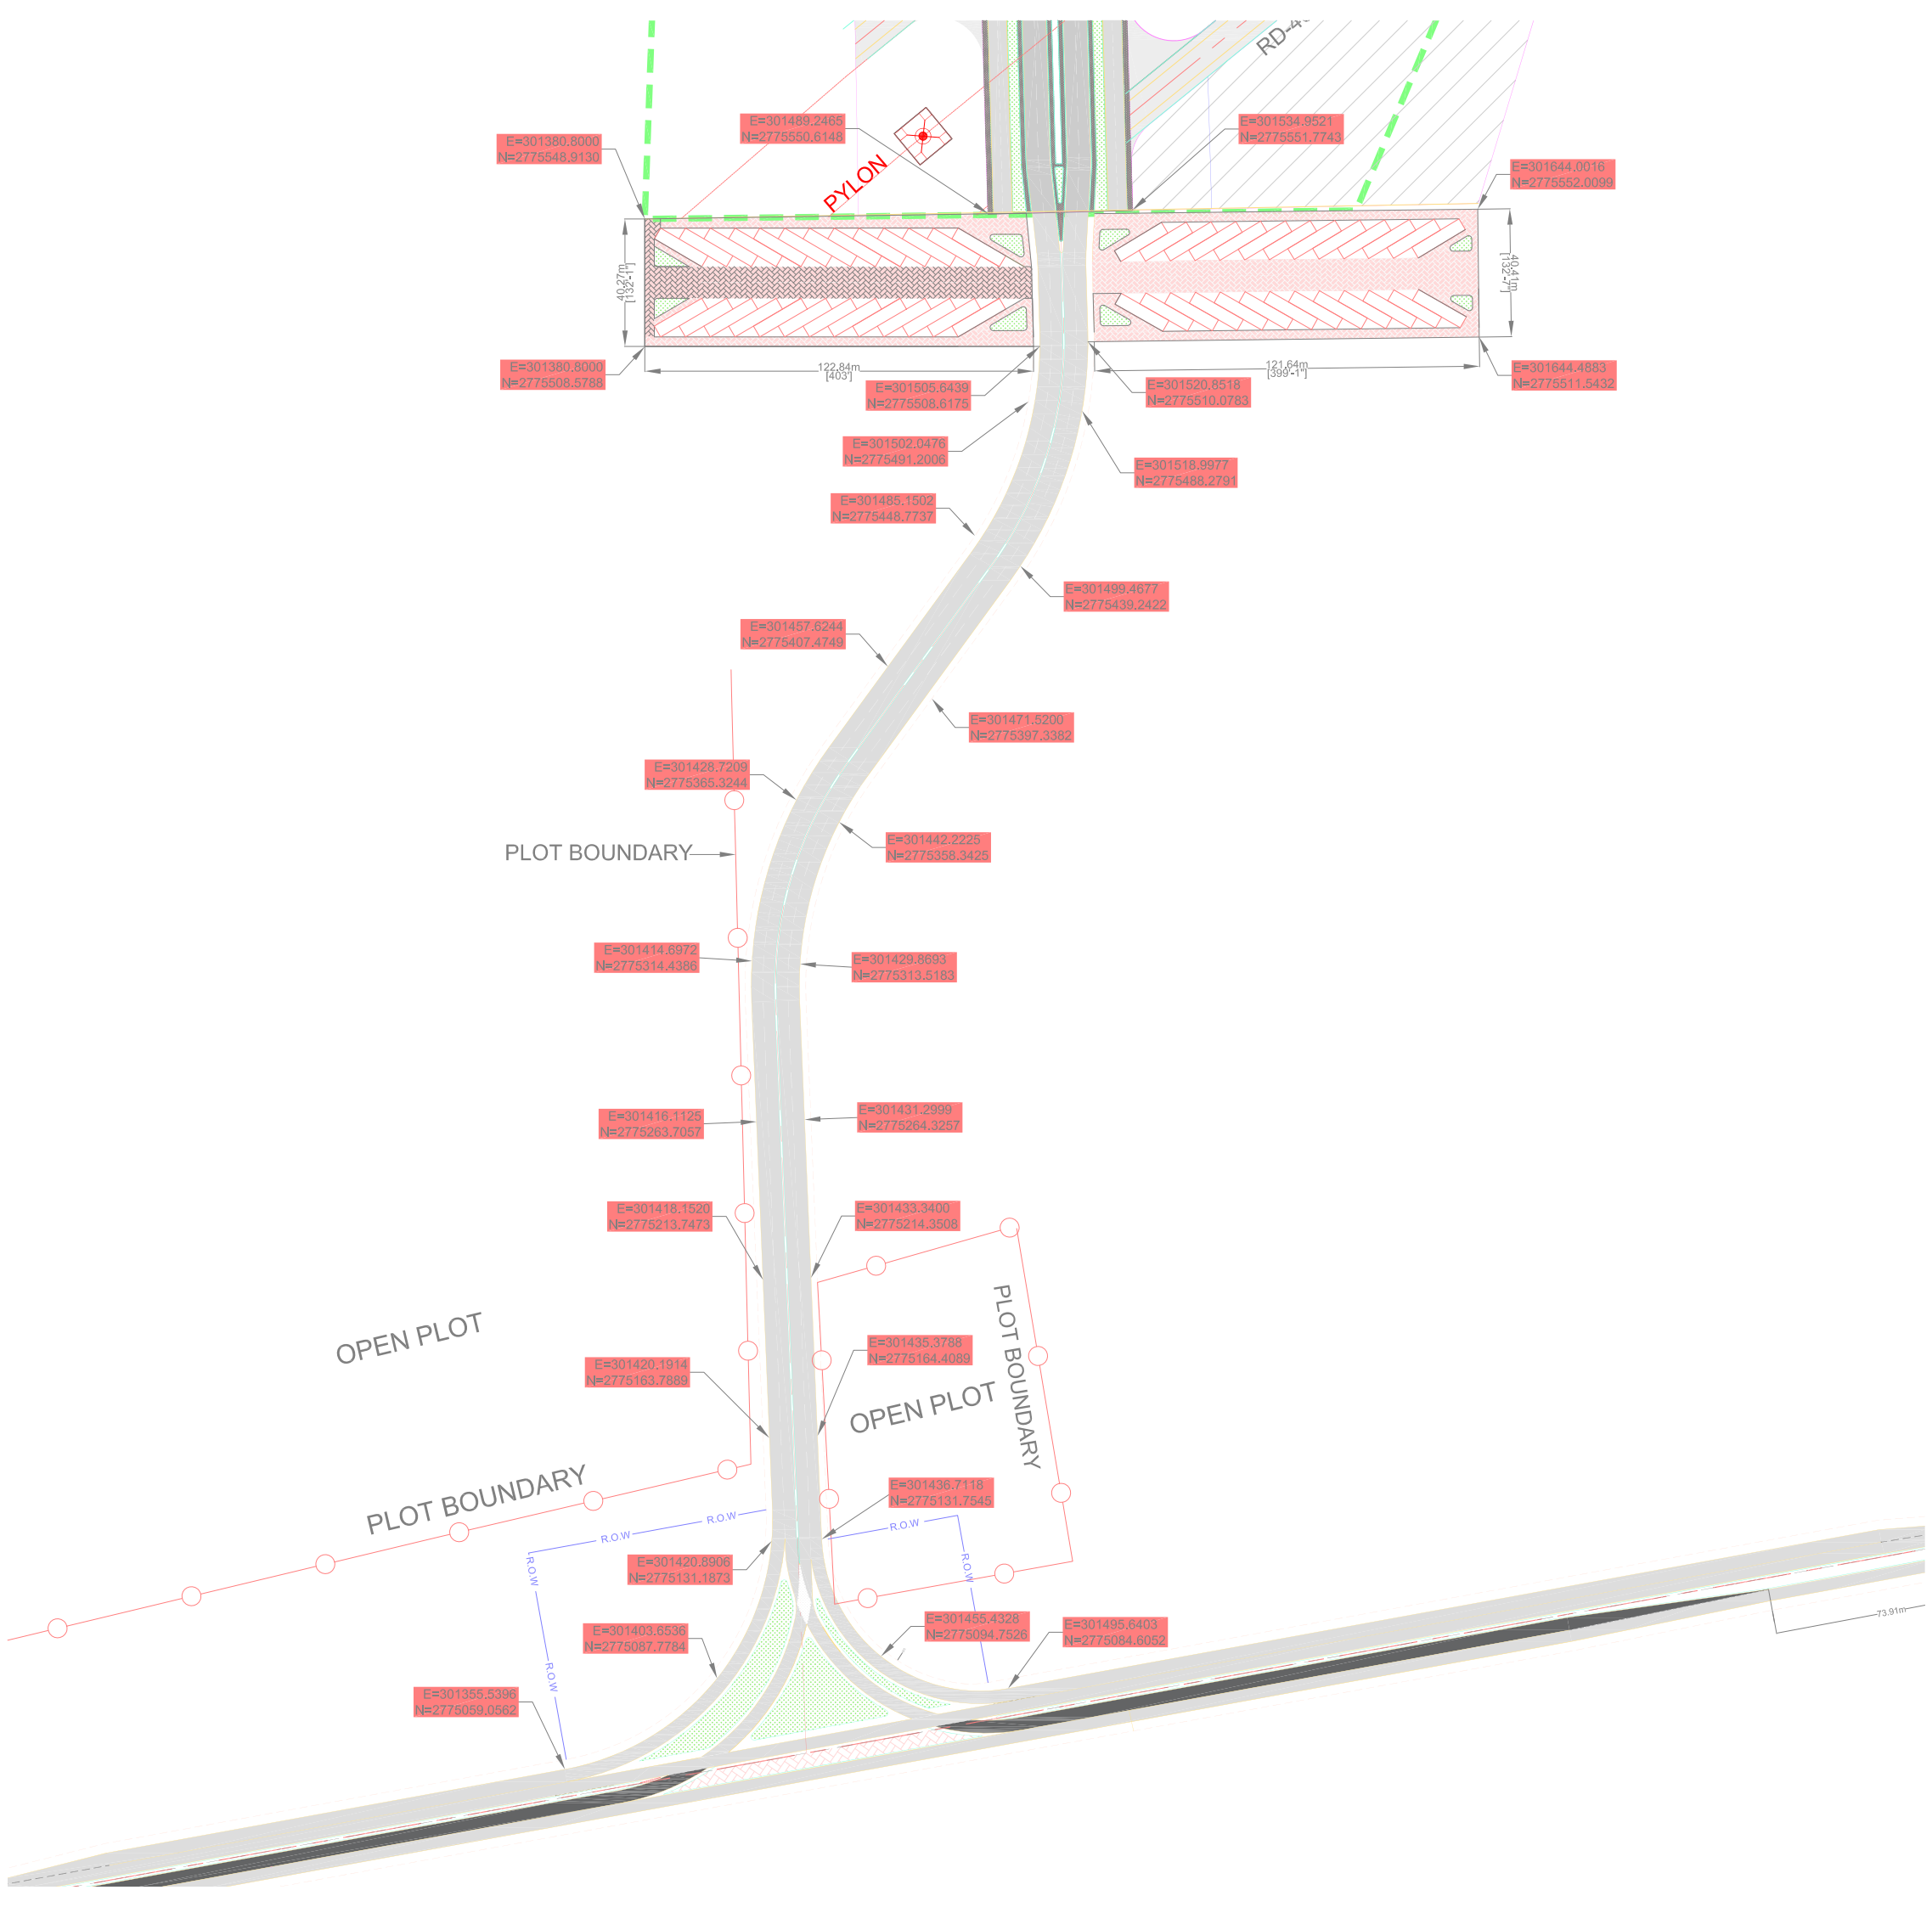

Sr. No.	REFERENCE	QUERY / CLARIFICATION REQUESTED	RESPONSE
	and other infrastructure required: (a) for the Project Activities; and (b) pursuant to the Legal Requirements; and (c) for the reinstatement of the Site in accordance with the Handover Conditions following the Final Expiry Date; and"	SSGC, KWSB and K-electric) that they will surely provide the required utilities for the Project. However, it is requested that clarity is provided whether these commitments will be translated through a legal instrument between the relevant departments.	Concessionaire for such purposes.
44.	Clause 11.2.2 of the Concession Agreement. "From the Marketing Launch Date and till the first (1st) anniversary of the Marketing Launch Date, the Concessionaire shall offer: (a) seventy percent (70%) of the Plots to Marble and Granite Sector Zone Enterprises for allotment on a 'right of first refusal' basis; and (b) remaining thirty percent (30%) of the Plots to the Allied Sector Zone Enterprises,"	In the event the Concessionaire fails to attain these percentages in the first year, will the Concessionaire still be liable to pay the agreed share to SEZMC? Furthermore, in consideration of the current market practice, it is requested that the same addresses SME businesses. Lastly, it is requested that the time duration of first right of refusal in the subject section be revised from twelve (12) months to three (3) months as (3) months are sufficient for the developer to market the plots to marble sector and determine if 70 percent of plot can be sold to the marble sector or not.	1. Yes. The Committed Annual Lease Amounts are fixed. 2. The split between Marble and Granite and Allied Sector Zone Enterprises includes SME businesses. 3. No change.
45.	Clause 11.2.6.1 of the Concession Agreement. "shall refund eighty percent (80%) of the payments received from the Zone Enterprise till the date of cancellation of	In the event of insufficiency of funds to pay under 11.2.6.1, it is requested that there should be no obligation to share the payments between the SEZMC and the Concessionaire. Moreover, it is highlighted that eighty percent	No change.

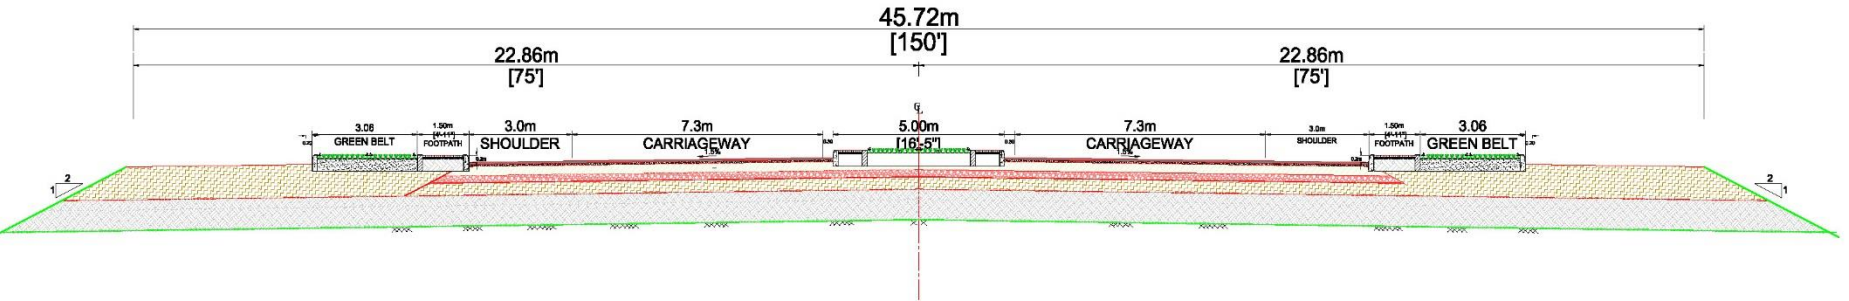

Sr. No.	REFERENCE	QUERY / CLARIFICATION REQUESTED	RESPONSE
	the Allotment Letter and the remaining twenty percent (20%) of the payments shall be shared between SEZMC and the Concessionaire on a 70:30 basis; and"	(80%) refund of payment is very high and the same should be revised to twenty (25%) percent.	
46.	Clause 11.3.1 of the Concession Agreement. "The Concessionaire shall enter into sub-lease agreements with the Zone Enterprises after at least six (06) Months from the commencement of the commercial operations by the respective Zone Enterprise in the allotted Plot, as verified by the Independent Engineer, in accordance with the Legal Requirements and in the form and substance agreed between the Parties (the "Sub-Lease Agreements")."	It is noted that lease to the zone enterprises is contemplated to be granted once the same achieve six (6) months of operations. Such arrangement will severely hamper and restrict the ability of the zone enterprises to raise debt financing for their industry/projects since the zone enterprises will not be able to create any security interest on the immovable property in favor of its lenders until the lease is granted. This will have a serious impact on the marketability of the project to the zone enterprises. It is proposed that the Concessionaire is allowed to grant lease to the zone enterprises at the outset.	No change.
47.	Clause 13.4.1.2 of the Concession Agreement. "SEZMC (through Independent Appointees) has confirmed that it has completed its "know your customer" review to its satisfaction (acting reasonably and without unreasonable delay) and that the proposed transferee is acceptable to it (in its sole discretion) on	How does the SEZMC propose to do that? This will require submission of certain documents from the relevant party. In consideration of the same, it is requested that this clause be redrafted to clarify the criteria against which the SEZMC will carry out the know your customer review of the proposed transferee.	No change.

Sr. No.	REFERENCE	QUERY / CLARIFICATION REQUESTED	RESPONSE
	reputational or similar grounds, taking into account without limitation, such transferee's environmental and social track record, links to terrorism, political affiliations and conflicts of interest;"		
48.	Clause 18.4.1 of the Concession Agreement. "failure to make a payment of money in accordance with the Party's obligations under this Agreement;"	This is arbitrary in nature. If the Concessionaire is under no position to generate cashflow during occurrence of a FME how will the Concessionaire ensure compliance with this clause.	No change.
49.	Clause 18.4.9 of the Concession Agreement. "delays resulting from reasonably foreseeable unfavourable weather (including monsoon) or sea conditions or other similar reasonably foreseeable adverse conditions;"	Non-FME to be reconsidered. In light of volatile climate change, this should be considered a FME.	No change.
50.	Clause 18.4.10 of the Concession Agreement. "delays or non-performance of any Project Activities as a result of SARS-CoV-2, except where complete ban and lockdown measures are imposed by Competent Authorities, results in suspension of	If this happens, how does SEZMC expect the Concessionaire to ensure compliance with the remaining sections of this clause (especially 18.4.1)?	No change.

Sr. No.	REFERENCE	QUERY / CLARIFICATION REQUESTED	RESPONSE
	Project Activities; and"		
51.	Clause 20.9.1. Of the Concession Agreement. "Within one (01) Month following the Final Expiry Date, the Independent Appointees shall: (a) procure approval of SEZMC with respect to the preferred mode of transfer (either Concessionaire's right, title and interest in the Project or acquisition of Shares) for satisfaction of the applicable Handover Conditions; and (b) carry out such inspections as they deem necessary to determine if the Concessionaire has satisfied the Handover Conditions."	It is noted that the in case of default of the Concessionaire, SEZMC has the right to terminate the DCA and subsequently, at its option, to acquire the shares of the Concessionaire or Concessionaire's right, title and interest in the Project. Considering that the agreement will stand terminated in case SEZMC exercises such right, it is unclear as to what rights the Concessionaire and the zone enterprises will have in the Project in case the shares are not acquired by the SEZMC. The complete play out of such a scenario needs to be clarified by SEZMC.	Please refer to Appendix 14 of the Concession Agreement.
52.	Appendix 10 – Annexure II – Paragraph 5 of the Concession Agreement. "The Zone Enterprise shall: (b) complete construction on the Plot within twenty-four (24) months from the Allotment Letter Date,"	The requirement on the zone enterprises to achieve completion within twenty four (24) months is onerous. The contemplation by SEZMC does not take into account projects that may have a construction period of more than 24 months. Please amend accordingly.	No change.

GEOTECHNICAL INVESTIGATION
FOR
MARBLE CITY, NORTHERN BYPASS
K A R A C H I

1. INTRODUCTION:

M/s Special Economic Zones Management Company (SEZMC) have embarked upon the development of Marble City located on Northern Bypass, Karachi. The entire area of the proposed City comprises 300 acres of land.

M/s EA Consulting (Pvt.) Limited are providing consultancy services to the project.

In order to obtain preliminary information about the subsoil conditions, a program of preliminary investigation was undertaken. At present, the site has undulating topography. Therefore, once leveling / grading of the site has been completed, detailed geotechnical investigation will be performed at each plot. This is because leveling / grading may involve filling at some places and cutting at others.

Geotechnical Services performed the investigation in June-July, 2021.

The program of investigation comprised of drilling ten boreholes, varying in depth from 15.0-30.0 m. Moreover, ten testpits were manually excavated and carried to a depth of 1.50 m below existing ground level. The testpits were logged & bulk samples were obtained.

In order to ascertain the degree of compactness / consistency of substrata, standard penetration tests (SPTs) were performed at various depth wherever found feasible.
Moreover core samples were extracted using double tube core barrel.

Selected soil and water samples were sent to the laboratory of 'Geotechnical Services' Karachi, for the evaluation of geo-engineering characteristics.

This report presents a review of subsoil investigation performed at the project site and pitlogs showing existing subgrade condition. **.**The field and laboratory test data has been analyzed for the evaluation of allowable bearing pressure. The recommendations regarding the type and bearing capacity of foundations are incorporated in the report.

The report also incorporates borehole / testpit location plan, borelogs, pitlogs, soil profile, field/laboratory test results and photographs.

2. PROGRAM OF INVESTIGATION:

Field Investigation:

The program of subsurface investigation at the project site consisted of drilling ten boreholes and ten testpits. The boring was accomplished by rotary method.

Following Tables A & B present the break-up of borehole and testpit depths with respect to coordinates and ground elevations:

TABLE A
BOREHOLE DETAILS

Boring No.	Coordinates		Ground Elevation (m)	Investigated Depth (m)
	Easting	Northing		
BH-1	302187.000	2777570.000	15.416	15
BH-2	301816.590	2777245.256	8.596	10
BH-3	302093.000	2777239.000	16.932	15
BH-4	301650.108	2776920.565	6.519	10
BH-5	302105.834	2776738.562	24.38	10
BH-6	301615.659	2776524.793	7.613	30
BH-7	301913.567	2776481.462	23.715	15
BH-8	301654.106	2776249.043	11.054	10
BH-9	301457.328	2775846.460	8.532	15
BH-10	301743.262	2775924.839	16.792	10

TABLE B
TESTPIT DETAILS

Testpit No.	Coordinates		Ground Elevation (m)	Investigated Depth (m)
	Easting	Northing		
TP-1	302066.209	2777481.329	12.441	1.5
TP-2	302214.501	2777259.128	23.908	1.5
TP-3	301666.132	2777179.401	6.727	1.5
TP-4	301955.956	2777027.406	16.107	1.5
TP-5	302055.622	2776871.936	39.165	1.5
TP-6	301754.965	2776636.907	12.187	1.5
TP-7	301841.117	2776443.579	22.86	1.5
TP-8	301449.757	2776477.726	4.752	1.5
TP-9	301583.929	2776211.515	9.111	1.5
TP-10	301515.954	2775816.697	9.294	1.2

Standard penetration tests (SPTs) were performed at various depth horizons wherever found feasible. These tests were performed in accordance with ASTM Designation D-1586. This test gives indication of degree of compactness/consistency of granular/cohesive substrata. The 'N'-values are shown on borelogs appended to this report.

Disturbed samples were obtained through split spoon sampler used in the standard penetration tests. These samples were carefully examined to identify the soil types at various depths. The samples were placed in plastic containers, marked with borehole number, depth and subsequently, dispatched to the laboratory. Moreover undisturbed samples were extracted by means of thin-walled Shelby tube sampler.

Core samples were extracted by means of double tube core barrel. After each run of the core barrel, percent core recovery and rock quality designation (RQD) were determined. The cores were stored in wooden core boxes. Wooden markers indicating depth and run numbers were inserted between each core run. The core boxes were, then, transported to the laboratory for testing. Some of the cores were sealed with molten wax and treated as undisturbed sample.

Laboratory Testing:

In order to arrive at a rational evaluation of the geotechnical properties of the substrata, a program of laboratory testing was undertaken in the laboratory of Geotechnical Services. Following physical and chemical tests were performed on representative soil and water samples obtained from boreholes:

- Grain size analysis
- Atterberg Limits
- Moisture Content
- Unconfined Compression
- Bulk Density
- Total salts
- Sulphate content
- Chloride content
- pH value

Following tests were performed on testpit samples

- Grain size analysis
- Atterberg Limits
- Modified AASHTO Compaction
- Three Point

The results of laboratory tests are appended to this report.

Observations were regularly made in boreholes to determine the position of ground water table. The position of water table is indicated on the borelogs.

3. SUBSURFACE CHARACTERISTICS:

A study of boreholes (except BH-6) has revealed that top 2.0m comprise of hard, shale with limestone / siltstone pieces and medium dense, SAND deposits. This is underlain by medium to very dense, silty SAND / sandy SILT and hard, clayey SILT / SHALE deposits. This is followed by friable to medium hard, SANDSTONE and medium hard, SILTSTONE deposits that continue upto the investigated depth of 15.0 m.

In borehole, BH-6, top 4.0 m consists of loose, silty SAND / sandy SILT and localized fill material, underlain by dense, SAND deposits. This is followed by medium hard, SANDSTONE and SILTSTONE deposits that continue upto the investigated depth of 30 m

Major subsurface deposits can be described as follows:

A. Brown, medium dense, silty SAND / sandy SILT

B. Brown, medium to very dense, silty SAND / sandy SILT

C. Grayish brown, hard, clayey SILT / SHALE

D. Brown, friable to medium hard, SANDSTONE

E. Grayish brown, hard, clayey SILT / soft SILTSTONE

F. Gray, medium hard, SILTSTONE

The exact sequence of occurrence of these deposits is shown on boreholes appended to this report.

Ground water table was encountered at a depth of about 2.0-7.0 m below existing ground level.

FOUNDATION RECOMMENDATIONS:

4.1 General:

Foundation is a structural member that supports the loads of a structure and distributes them over the substrata on which it rests. In order to be satisfactory, the foundation should satisfy the following requirements:

a) The foundation must be safe against the possibility of shear failure

b) The foundation must not undergo excessive differential settlement

Calculations have been made to check allowable soil pressure for both the shear and settlement criteria.

Keeping in view the stratigraphy of the area and field and laboratory test results, the allowable pressures have been computed.

4.2 Foundation Type:

The selection of foundation type depends upon the subsoil conditions, type of structure, and structural loads.

A study of boreholes (except BH-6) has revealed that top 2.0m consist of hard, shale with limestone / siltstone pieces and medium dense, SAND deposits. This is underlain by medium to very dense, silty SAND / sandy SILT and hard, clayey SILT / SHALE deposits. This is followed by friable to medium hard, SANDSTONE and medium hard, SILTSTONE deposits.
In borehole BH-6, top 4.0 m consist of loose, silty SAND / sandy SILT and localized fill material underlain by dense, SAND deposit. This is followed by medium hard, SANDSTONE and SILTSTONE deposits that continue upto the investigated depth of 30 m

Taking into account the subsoil conditions and anticipated structural loads, it is recommended that the proposed structures be supported on **isolated / combined footings** placed at 2.0 m below the existing ground level. However, for structures in the proximity of borehole BH-6, the footings should be placed at 4.0 m depth, ensuring that loose soil has been crossed.

4.3 Allowable Bearing Capacity

Field and laboratory data have been analyzed for the estimation of allowable bearing pressure.

For boreholes BH-1 to BH-10 (except BH-6)

Allowable (net) bearing capacity of **isolated /combined footing** placed at **2.0 m** depth below the existing ground level should be adopted as **2.00 tons/ft^2**

For borehole BH-6

Allowable (net) bearing capacity of **isolated /combined footing** placed at **4.0 m** depth below the existing ground level should be adopted as **2.00 tons/ft^2**

It must be noted that these recommendations are of tentative nature, Hence final recommendations will be given after detailed investigation at different plots of Marble City.

It is important to note that before placing foundation concrete the excavations should be carefully inspected to ensure that foundation is being placed in competent stratum. This precaution is necessary to guard against localized fills and inhomogenities.

4.4 Stability of Excavations:

For foundation excavation upto 4.0 m, it will be essential to shore/support the excavation walls. Failure to do this may result in slope failure that might endanger the lives of workers. This may be done by proper shoring / bracing.

It is essential to keep the excavation dry and excavation should be performed during dry season.

4.5 Dewatering:

Since groundwater occurs at 2.0-7.0 m depth, excavation will require dewatering where the foundation level is below the water table. This can be achieved by a system of well points or by submersible pumps.

However, the ground water regime can change with the passage of time depending upon the climatic conditions and environmental changes.

4.6 Seismic Coefficients:

According to the Uniform Building Code (1997), the soil profile falls in 'S_B' category corresponding to 'rock '.

Following table gives seismic zone, seismic zone factor, soil profile type and seismic coefficients.

Seismic zone	**Zone factor 'z'**	**Soil profile Type**	**Seismic Coefficient 'Ca'**	**Seismic Coefficient 'Cv'**
2B	0.20	' S_B'	0.20	0.20

5. TESTPITS INVESTIGATION:

Subsoil Description & Classification:

Table 5.1 below presents soil description, AASHTO classification and general rating of subgrade materials encountered in testpits.

T A B L E 5.1

SOIL DESCRIPTION / CLASSIFICATION OF SUBGRADE

Testpit No	Description	AASHTO Classification	General Rating as Subgrade Material
TP-1	Silty SAND / sandy SILT	A-4	Fair
TP-2	LIMESTONE	-	-
TP-3	Gravelly, fine to coarse SAND with silt	A-2-4	Fair to Good
TP-4	Sandy CLAY / clayey SAND	A-4	Fair
TP-5	LIMESTONE	-	-
TP-6	Silty, fine to coarse SAND	A-4	Fair
TP-7	Fine to medium SAND	A-2-4	Fair to Good
TP-8	Silty, fine to medium SAND	A-4	Fair
TP-9	Silty, fine to medium SAND with gravel	A-4	Fair
TP-10	Silty, fine to medium SAND, trace to little clay	A-4	Fair

It must be noted that water table was not encountered upto the investigated depth of 1.50m.

5.1 Classification Tests:

These included the performance of grain size analysis and liquid & plastic limits on testpit samples.

Table 5.2 presents summary of classification test results

T A B L E 5.2

SUMMARY OF CLASSIFICATION TEST

Testpit No.	Maximum Size (mm)	Gradation (% Passing)				Liquid Limit	Plasticity Index	Classification
		4.75	2.00	0.425	0.075			
TP-1	4.75	100	99	97	52	-	-	A-4
TP-2	75	61	57	54	35	-	-	A-2-4
TP-4	9.50	96	91	84	55	23	05	A-4
TP-6	9.50	99	99	97	45	-	-	A-4
TP-7	9.50	99	98	94	33	-	-	A-2-4
TP-8	4.75	100	99	98	46	-	-	A-4
TP-9	9.50	97	91	84	46	-	-	A-4
TP-10	4.75	100	99	98	43	-	-	A-4

5.2 Compaction/CBR Tests:

Three point soaked CBR tests were performed on the 05 subgrade bulk samples. Table 5.3 gives details of compaction and CBR tests. The CBR values are being presented for 95% & 98% maximum dry density. The results demonstrate that the CBR value at 95% MDD varies from 13.05 % in TP- 4 to 25.52 % in TP-3.

T A B L E 5.3

COMPACTION / CBR TEST RESULTS

Pit No	Classification	Modified AASHTO Compaction		Soaked CBR	
		Max Dry Density (gm/cc)	Optimum Moisture (%)	Percent MDD	CBR (%)
TP-1	A-4	1.989	10.10	95	20.90
				98	21.76
TP-3	A-2-4	1.932	10.18	95	25.52
				98	26.68
TP-4	A-4	2.028	9.95	95	13.05
				98	13.72
TP-6	A-4	1.862	12.10	95	16.15
				98	16.82
TP-9	A-4	1.945	12.15	95	22.70
				98	23.75

5.3 Design CBR:

- Design CBR value at 95% MDD should be taken as 19 %.
- Design CBR value at 98% MDD should be adopted as 21 %.

TOPOGRAPHIC SURVEY REPORT

1. The Project – Marble City Karachi.

1.1. Introduction

The purpose of this Inception Report is to summarize the preliminary insights of the Advisory Consortium gained after undertaking the initial steps for the project. We present in this report our findings organized such that they suggest the approach and methodology of ensuing analyses and deliverables as required in the project's Terms of Reference (ToRs). Simultaneously, the information gathering phase is continuing as we further refine and validate our findings and assessments towards the accomplishment of project objectives.

1.2. Project Background

The Government of Pakistan (GOP) passed Special Economic Zones (SEZ) Act in July 2012, which aims to attract Foreign Direct Investment. The SEZ Act guarantees a 5-year tax holiday on income and provides a one-time exemption on all capital goods and machinery for operations and management of businesses within the zone. The Act envisaged the former Sindh Board of Investment (today's Investment Department, Government of Sindh) to be the focal point for all SEZ related matters in the province. Keeping in view the success of economic zones and industrial estates in developing specific sectors, both in developed and newly industrialized countries, GoS has decided to develop the same strategy to uplift the marble and granite sector in Sindh.

Marble City Karachi project shall have tremendous investment and growth potential for entrepreneurs being based on high-end technology, innovation and services. Marble City Karachi seeks to establish a purpose-built industrial park for the manufacture of value-added stone and marble products. It envisages providing a facility where value-adding marble sector players can be relocated so that they have better access to sources of raw materials. The Sindh Economic Zones Management Company (SEZMC), established as a Provincial SEZ Entity in 2017 by the Investment Department, GoS, has acquired 300 acres of land area situated by the Northern Bypass with the intention of creating an SEZ for businesses in the marble and granite sector.

A detailed Feasibility study exercise was carried out by Sindh Board of Investment (now Investment Department, Government of Sindh) for the establishment of Marble City Karachi in 2014-2015 The feasibility studies included technical, legal and financial viability along with commercial assessment of establishing the Marble City Karachi project at that time,

The option of relocation of existing marble sector players from Karachi's outskirts being Bara Board, Pak Colony and Mangpphir in a dedicated Marble sector Industrial Zone were studied in detail. .

This project intends to act on the insights learned from these studies to establish an industrial zone that shall assist in uplifting the distressed Marble and Granite sector of Pakistan, along with provision of industrial enclaves for other construction sector players of Karachi.

1.3. Project Objectives

The main objectives of the Project are as follows:

- Provide a secure, purpose built industrial zone for the Dimension Stone (Marble & Granite) sector in Karachi.
- Improved facilities for value addition stone sector.
- Better accessibility of value-added sector to raw materials of Sindh and Baluchistan
- Increased direct and secondary job creation, supporting poverty alleviation in the region
- Enhance exports and to attract local & international investment in the Dimensional stone industry

2. Topographical Survey – Work Introduction

2.1. Survey Team

Team 1: Control Point Establishment, surveyors with High Accuracy Static GPS

Team 2: Traversing

Team 3: Topo with RTK GPS

Team 4: Topo with Total Station - I

Team 5: Topo with Total Station - II

Team 6: Data Processing & Mapping

2.2. Available Data

The Client provided outline of specific area for topographic survey in the Kmz format.

2.3. Mobilization of Survey Team with Equipment

The survey teams were deployed on site in 3rd week of November 2020 with their equipment and other available data.

Equipment & Software:

a) High Accuracy Triple Frequency RTK GPS Sokkia/Topcon Model GR-5 including GRX1.

b) 03 No's of Total Station, CX105c x 2 and 630RK x1

c) Spectrum Survey Post Processing and data processing software

d) 12 - D modeling processing software.

e) AutoCAD 2D, 3D (2013)

2.4. Reconnaissance and Pegging Survey

Soon after mobilization, a detailed reconnaissance of the project area was carried out. For survey purpose start point is established at M-09 Highway along High Tension power line near custom choki.

2.5. Static Survey

Establishment of Horizontal of vertical control point using Multi Frequency GNSS System

2.6. Horizontal Control Establishment

Primary Horizontal Control was established by GPS observation, within project limit, using Topcon GNSS GR-5

2.7. Vertical Control Establishment

Primary Vertical Control was established by GPS observation at Suitable locations, along the project Area using Sokkia/Topcon GNSS.

2.8. Topographic and Data Elevation Model

Topographic Survey

The topographic survey of project Area was carried out by high accuracy GNSS and Total Station to depict all manmade and natural features existing inside the survey area, including leveling.

The instrument was setup on a control point and its coordinates were fed into the Total Station. After stationing, starts taking details of ground by utilizing the feature code database, which is already, save in the hard drive of data collector.

Topography and creation of DEM with 05 meter contour interval to represent topographic surface, derived from GPS kinematic observation RTK and PPK as well as total station where needed.

DEM preferably generated by RTK/PPK observations, total station used for same purpose where GPS accessibility will not be possible due to signal reception.

2.9. Downloading & Transmittal of Data

The Surveyor deployed on detailed survey with Total Station and RTK GPS at site, down loaded the raw survey data from his electronic data collector to the computer as soon as a survey job was completed. The raw data was then sent to Head Office by e-mail, where downloading to mapping software for processing and production of drawings was carried out.

2.10. Processing Of Raw Survey Data

12 - D Modeling Mapping and Design (Version 7.0) software, and Spectrum Survey software were used for the processing of raw survey data. This data was in the form of angles, distances, elevation and feature codes at different point. Processing Software generated the DXF drawings and ASCI files for further processing. The software possessed the raw survey data, assigned them their respective feature codes and incorporated preliminary line work.

2.11. Drafting and Plotting

The DXF drawings obtained from software then be drafted using AutoCAD software to refine line work, features, text etc. The three Dimensional (3-D) topographical drawing contains all the features observed on site in a fixed pattern and in an appropriate manner with all predefined rules, strictly followed by CAD

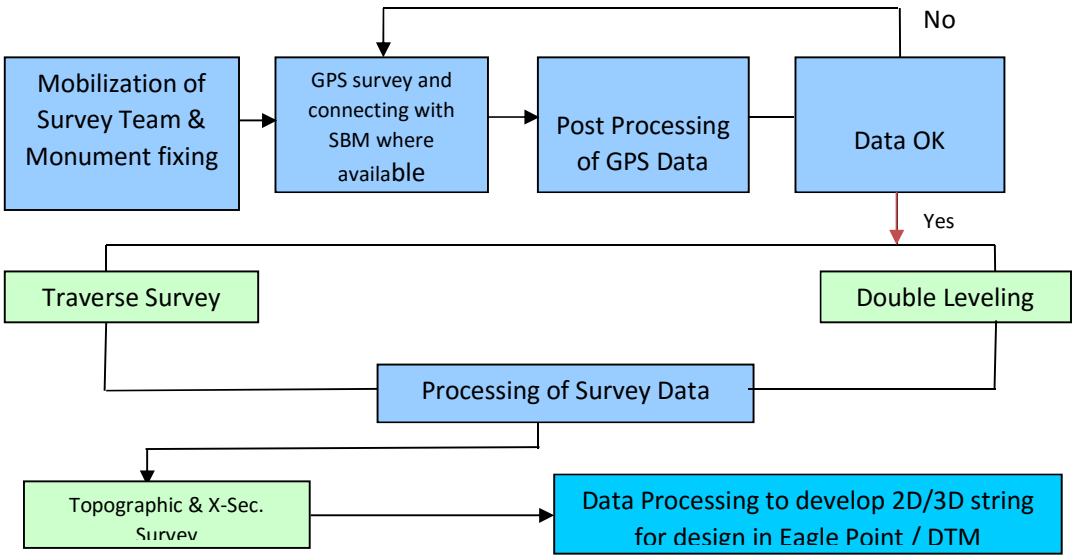

operator. The survey drawing thus produced after drafting and checking was then being sent back to site for verification.

2.12. Incorporation of Field Verifications

The draft print of survey drawings was then sent back to the site for further verifications. Any changes highlighted from field were incorporated in survey for ensuring the perfection and accuracy of work.

2.13. Flow Chart of Topographic Survey

Detailed topographic survey is conducted using contemporary tools and techniques to enable engineers in carrying out detailed engineering design of Project Road in accordance with the requirements identified in the Terms of Reference. The following flow-chart briefly describes the procedures of different components of this topographic survey.

3. Adopted Methodology

3.1. Pegging & Monument Fixing

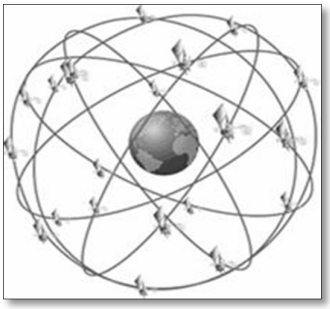

Route Reccee and Pegging was completed by the Survey Team Leader himself, the senior most surveyor. The aim of this activity is to establish control points at suitable and safe places along the route by establishing primary and secondary control points. This will ease the job of other survey parties and other survey activities. Primary Control Points are generally established at an interval of less than 10 km to optimize the satellite signal reception, whereas Secondary Control Points are generally established at about 250m to 350m interval considering the visibility in the Project Area.

Permanent Control Pillars using GPS Survey were also installed. Every effort was made to select locations, which were safe from conservation point of view and free of any obstruction to facilitate uninterrupted GPS signals and observation.

3.2. Primary Control by GPS for X, Y, Z.

A. General

The GPS system was originally designed for military use only, providing sea, air and ground forces of the United States and NATO with an all-weather, high-precision, worldwide real-time positioning system. Though initially designed as a military system, it became freely available for international civil use. The system has a complete set of at least 24 satellites orbiting the earth in a carefully designed pattern. The initial design was for a 24 satellite constellation, each orbiting at an altitude of approximately 20,200 km above the earth, in one of six orbital planes. Each satellite broadcasts a unique "bar code", known as Pseudo Random Noise (PRN) code, which enables GPS receivers to identify the satellites from where the signals came, and makes positioning possible.

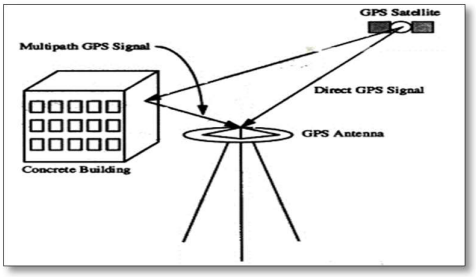

A master control station updates the information (message) component of the GPS signal with satellite ephemeris data and other announcements to the users. This information is then decoded by the receiver and used in the positioning process.

The User Segment is the most important segment of the system and is comprised of all users making observations with GPS receivers. The civilian GPS user community has increased dramatically in recent years, due to the emergence of low cost, portable GPS receivers and the ever-expanding areas of applications in which GPS has been found to be very useful. Some of these applications are: surveying, mapping, navigation and vehicle tracking.

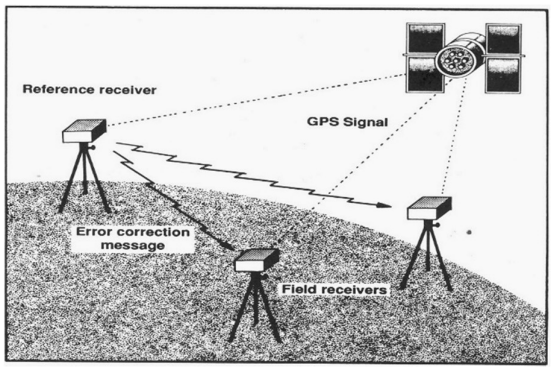

B. GPS Limitations

Though GPS can provide a worldwide 3-D position, 24 hours a day, in any type of weather, the system does have some limitations. First, there must be a (relatively) clear "line of sight" between the receiver's antenna and several orbiting satellites. Buildings, trees, mountains, steep cliffs, overpasses, and other obstructions that block the line of sight between the satellite and the observer (GPS antenna) make it impossible to work with GPS. Anything shielding the antenna from a satellite can potentially weaken the satellite's signal to such a degree that it becomes too difficult to make reliable positioning. Any obstruction that can block or interfere with a radio signal can effectively block or interfere with GPS signals.

Bouncing of the signal off nearby objects may present another problem, that of distinguishing between the signals coming directly from the satellite and the "echo" signal that reaches the receiver indirectly. This phenomenon is referred to as multi-path. Multi-path refers to the existence of signals reflected from objects in the vicinity of a receiver's antenna that corrupt the direct line-of-sight signals from the GPS satellites, thus degrading the accuracy of both code-based and carrier phase–based measurements. Particularly difficult is close-in multi-path in which the reflected secondary signals arrive only slightly later (within about 100 nanoseconds) than does the direct-path signal, having been reflected from objects only a short distance from the receiver antenna. In areas that possess these types of characteristics, longer observational times or traditional surveying techniques must be used instead of GPS positioning or to complement the GPS positioning. The receiver must receive signals from at least four satellites to be able to make reliable position measurements. In addition, these satellites must be in a favorable geometrical arrangement. The four satellites used by the receiver for positioning must be fairly spread apart. In areas with a relatively open view of the sky, this will almost always be the case because of the way these satellites were placed in orbit.

C. GPS Point Positioning

The position of a point is determined by measure distances or pseudo ranges from the receiver to at least four satellites. The GPS receiver "knows" where each of the satellites is at the instant in which the distance was measured. These distances will intersect only at one point, the position of the GPS receiver (antenna). The receiver "knows" the position of the satellites, because this information comes from the broadcast ephemeris that is downloaded when the GPS receiver is turned on. The GPS receiver performs the necessary mathematical calculations, then displays and/or stores the position, along with any other descriptive information entered by the operator from the keyboard.

D. Advantages of GPS

The most advantageous aspects of GPS are its accuracy, precision, and efficiency, particularly in survey tasks that span a large area. Traditional terrestrial survey activities that would have normally taken months to complete, now take only a few days utilizing GPS. Real-time applications of GPS enable surveyors to perform quick data collection. GPS is used exclusively to density control networks.

E. GPS Observations

GPS observations using "Trimble GPS 4000 SSI Dual Frequency Instrument" will be carried out using a pair of receivers, the "BASE" and the "Rover". The Base will be placed at known point and the Rover at the stations whose coordinates to be determined. Static mode of survey will be adopted with small baseline and longer observation time. All coordinates will be observed in UTM Coordinate System.

F. Post Processing Of GPS Data

Positioning information provided by GPS contain errors. The errors due to atmospheric effects and orbital perpetrations can be corrected by means of a technique called "Differential Correction".

During the post processing, the correct coordinates of the unknown points are obtained with reference to the correct coordinates of the known points.

For this Project, coordinates and levels of Survey of Pakistan Bench Marks (SBM) in the vicinity of project roads were explored, however, SoP SBMs could not be found. As such, coordinates/levels observed from GPS were used as reference coordinates for processing of GPS survey data.

At the end of each day the Post Processing of GPS observations in UTM was carried out using the Post Processing software to remove any possible error.

Coordinates obtained through GPS observation were then used for generating coordinates for Traverse Stations i.e. secondary control.

G. Secondary Horizontal Control by Traverse for X, Y.

Secondary Horizontal Control was established by Traverse Method using the Primary GPS Survey Control Points. These traverse control points were used by topographic survey teams and cross-section survey teams. These points were established at suitable places along the route by using small size pillars or by driving wooden pegs or by marking the station number by paint on road side permanent structures. Total Station is set at known point (in terms of Easting, Northing & Elevation), Tri-Bridge Target is set on the second known point, which is in direct visual contact from the first point. Values of E, N & H of first and second known points are feed in the Total station, and Total Station reads the second point where the tri-bridge is set. In this way, total station is oriented in terms of bearing, distance and elevation to the survey control established during the GPS survey. The Prism target is then fixed to third location, and Total Station observed angle and distance to this point. When, third point is still there with its prism fixed, the total station is moved to fourth point, re-read the third point for orientation, and fifth point is established using prism target, and so on, until the next GPS known point is reached, where the traverse surveyor closes his observation and checks his work. At the end of Traverse Survey, coordinates of all the unknown points are calculated using angle and distance, observed during the field work. The coordinates of Secondary Control (Traverse) points were ultimately used for Topographic Survey and X-Sec Survey.

The following precautions were taken in traverse observations to achieve the accuracy required for such work.

- Total Station with the least count of 1" (one second of arc) was used for all angular and linear measurements.
- Each traverse angle was observed on two zeroes taking measurements on both left and right faces. The agreement between the two values of the same traverse angle were not allowed to exceed 10". Observations were repeated where the discordance exceeded the given limit. The means of 2 sets (4 measures) of traverse angles were used for computing bearings.
- Total Station were used for all linear measurements. Having an accuracy of around 03 mm plus 03 parts per million of distance which can yield high accuracy up to 01 in 25,000.
- Reciprocal linear measurements were made for each traverse leg, thus measuring each distance twice in fore and back directions. The agreement between the two measurements was ensured to be of the order of 01 in 10,000. The means of the two measurements was accepted for the computation of traverse line.

H. Secondary Vertical Control by Double Leveling Technique for "Z"

Vertical Control were established using Double Leveling method with precautionary measures as provided hereunder:

- Pentax Titling Leveling instruments Model L-30 of magnifications 30X was used for control leveling.
- The longest permissible shot was limited to 100 meters provided the staff graduations could clearly be visible. The shots were further reduced to 50 meters and even shorter for accurate reading and to minimize the effect of shimmering created by high temperature.
- Two surveyors observed the leveling line in fore and back directions connecting all the traverse stations of the main traverse line en-route and establishing their own Temporary Bench Marks - TBMs on permanent structures or by marking the station number by paint on road side structures at suitable interval.
- The permissible discordance between "Fore" and "Back" leveling at any Benchmark was already kept at site.

4. Post Processing Of Field Data, Drafting and Plotting

Mapping and Design (Ver. 6.5) and Civil-3D software acts as an interface to transform the Total Station/GPS Data and develop topographic feature Maps and Digital Terrain Model (DTM) using raw elevations. The processed data is converted to ASC-II format which is used to develop DXF Format files. These DXF files are imported to AutoCAD software to develop Digital 3-Dimensional Survey Drawing. These AutoCAD drawings are further refined by draftsmen using specific layers, line type, line thicknesses, and text height. A detailed line work and insertion of appropriate symbols is also carried out at this stage to make the survey drawings more legible and easy to read for design engineers. Additional software are used to develop Digital Terrain Model (DTM) using the spot elevation and cross-section data collected during the field survey. This DTM eventually produces contours on any desired contour intervals.

As soon as these survey drawings were printed on appropriate scale, these were sent back to survey teams for field verification. At that stage surveyors visually verify all the survey drawings during again verification along with the BOR team and tapedar with client assistance (SEZMC). All omissions, errors, or missing information were recorded either on drawing manually or, if required digitally, and this data once again was sent back to office for updating the survey drawings.

Survey Control Data in – Annexure – A.

Topographic Survey Drawings are provided in – Annexure – B.
